

Kvaløya + – Sample Programme

This is a sample programme, which may vary considerably. The exact programme will depend on the prevailing weather and snow conditions (which can be changeable due to the maritime influence), group experience and aspirations.

Arrival Day:

Timing TBC: Arrive in Tromsø and onward transfer to our accommodation.

1830: Pre-course meeting to introduce Off Piste Performance staff, the area, as well as review weather and avalanche conditions. We will also carry out a kit check and discuss rescue and emergency procedures.

Guidebooks and maps will be available to give an overview of the area along with suitable objectives for the week. We will also discuss aims and aspirations to accommodate these during the week.

1930: Dinner: This will provide another opportunity to discuss any aims, aspirations, ask questions or make any last minute requests.

Day 1 – 6:

Ski Touring on Kvaløya, with possible excursions to Mainland Troms and Lyngen.

Objectives and associated timings for each day will be chosen and scheduled to meet the weather, avalanche conditions, aims and aspirations of the group. A typical day is likely to have the following format:

0730: Breakfast. A continental style breakfast will be available at the hotel. You will be given a packed lunch for the day.

0830: Briefing to introduce the venue and groups for the day. This first day often takes the form of a “shake down” day, the location being selected with respect to weather, prevailing avalanche conditions and the nature of the group.

0900: Departure for a day in the mountains. A good selection of objectives are a short drive away from our base. On the first day we will select a local mountain where we can take the opportunity to test our ski equipment and provide a suitable warm-up. A short practical session on avalanche rescue procedures is likely to take place, as a refresher or an introduction to the subject.

1600: Return to our base.

The main aim of the programme will be to do day ski tours on the main islands of Kvaløya, Ringvassøya, and the Troms Mainland. There are a wide variety of mountains available in

these areas which are easily accessible by road. "Ski to the sea" opportunities abound. This is a 'Ski Mountaineering' trip and the use of crampons and axes may be necessary to access summits or the best ski descents.

In previous years groups have skied: Buren (802m), Storstolpan (974m), Storsteinnestinden (1017m), Bentsjordtinden (1168m), Store Hollendaren (1029m), Middagstinden (1006m), Nordfjellet (1000m), Sofiatinden (1222m)
